SUMMARY

- Oxford-educated AI Engineer specializing in Trustworthy AI and Medical Data Security. Combining an MEng in Engineering with an MSc in Systems Security to build robust, privacy-compliant AI models for healthcare. Experienced in C++ / Python development and Identity Access Management (IAM) for enterprise environments. Seeking to leverage background in Computer Vision and Cybersecurity to deploy FDA/MDR-compliant diagnostic software (SaMD).

SKILLS

Core AI & Engineering Python, C++ (STL, Smart Pointers), PyTorch, OpenCV, Computer Vision, Deep Learning

Medical & Regulatory Awareness: DICOM Standards, ISO 13485 (Medical Devices), IEC 62304 (Software Lifecycle), HIPAA / GDPR Data Privacy

Security & Infrastructure: Identity & Access Management (IAM), RBAC, Adversarial Machine Learning, Secure Data Pipelines (ETL)

Tools: Linux/Bash, SQL, Git, Docker, CI/CD Pipelines.

PROJECTS

Medical AI Selected Projects

- 3D Brain Tumor Segmentation (MRI):** Automated the segmentation of active brain tumors from 3D MRI scans (T1ce) using the MSD Brain Tumor Dataset. Processed 3D volumes, built a medical image data pipeline, and visualized AI predictions against ground-truth clinical masks across multiple planes.
- Spleen Volume Screener (CT)** Implemented volumetric segmentation of the spleen from patient CT scans to aid in clinical diagnostics. Handled large-scale CT dataset extraction, tensor transformations, and GPU-accelerated model inference.
- Medical Imaging Data Pipeline:** Engineered programmatic manipulation of raw hospital imaging data (DICOM & NIfTI). Converted raw pixel data to Hounsfield Units (HU), applied clinical windowing, and rendered 3D NumPy arrays into multi-planar anatomical views.

WORK EXPERIENCE

ERNST & YOUNG EY

Cybersecurity Engineer Technology Consultant

Sep. 2024 — Present

Athens, Greece

- Identity & Access Management (IAM):** Lead technical implementation of RBAC (Role-Based Access Control) for high-compliance environments. Designed "Least Privilege" architectures essential for handling sensitive data (e.g., patient records)
- Secure Systems Architecture:** Managed SAP Authorization and segregation of duties, ensuring data integrity across complex, multi-user systems.
- Audit & Compliance:** Conducted technical risk assessments (ISO 27001) to identify vulnerabilities in data handling processes.

Project Management IAM UAM Microsoft Entra ID Azure AD SAP ERP

Military Cyber Defence Directorate Hellenic National Defence General Staff CSIRT

Security Engineer – SOC Analyst

Nov. 2021 — Nov. 2022

Athens, Greece

- SOC Operations:** Conducted Blue team operations as a SOC analyst Level 1, reducing incident response time through effective threat detection and mitigation strategies.
- Software Development:** Assisted in the development of software security projects, enhancing both red and blue team operations, improving threat detection accuracy

SIEM IBM Security QRadar Suricata IDS/IPS PaloAlto NGFW Barracuda Firewall WireShark TCPdump Nmap

IBM

Business Intelligence / ETL Developer Intern

June 2020 — Sep. 2020

Athens, Greece

- Data Pipeline Engineering:** Developed automated ETL pipelines (Python/SQL) to clean and transform large-scale datasets for the "Phoenix" project.
- Data Visualization:** Built comprehensive dashboards to translate raw technical data into actionable insights for non-technical stakeholders.

Business Intelligence Python SQL Data Analysis Data Warehouse

EDUCATION

University of Oxford

MSc in Software and Systems Security

Oct. 2023 — Present

Oxford, United Kingdom

- Relevant Modules:** Computer Vision, Deep Learning, Privacy-Preserving Machine Learning, Data Privacy & Risk.

- **Key Focus:** Specialized in "Adversarial AI" – understanding how to defend AI models from attacks and ensure robustness in safety-critical applications (e.g., medical diagnostics).

Aristotle University of Thessaloniki (AUTH)

MEng of Electrical and Computer Engineering

Oct. 2015 — Oct. 2021

Thessaloniki, Greece

- **Thesis:** Designed a tool to automatically detect vulnerabilities in code before deployment. Demonstrated ability to build "Safety-First" software development lifecycles (SDLC), a critical requirement for medical device software (IEC 62304).
- **Relevance:** Strong foundation in C++ and Engineering Principles, bridging the gap between hardware constraints and software logic.

☀ TRAINING & CERTIFICATION

CompTIA

- CompTIA Security+

Present

Coursera

- Python for Data Science and AI

Mar 2020

🇬🇷 LANGUAGES

- **English:** Professional Proficiency

- **Greek:** Native

🏆 AWARDS

- Award for Academic Excellence from the Greek Ministry of Education given annually
- Award for high performance in the Panhellenic University Entrance Exams by Eurobank Greece

Greece, 2015
